

Anatoly Viktorovich Klepov
presents his new book

ESPIONAGE, ENCRYPTORS, AND CHOCOLATE

Moscow, 2022

WHAT IS THE BOOK ABOUT?

The weapons of the army are tanks, airplanes, machine guns, rockets, i.e. anything that can effectively annihilate and destroy the enemy.

Radio intelligence weapons are supercomputers that decipher enemy encryptions. And the weapon of an intelligence is the recruitment of agents who obtain the most important and most secret information.

After reading the book carefully, you will be able to understand contemporary political events more clearly. Including the emergence of a new nuclear Armageddon in the world, like the Cuban Missile Crisis.

"The strongest power is the one no one knows about."

Confucius

A book about encryptions, radio intelligence, and the mysterious chocolate of the Aztec priests, used by Jesuits and secret services to control and change the political structure of the world

WHY SHOULD YOU READ THIS BOOK?

1300+

historical sources used
in the writing of this book

500

years of intelligence history
is covered by the book

30+

years of collecting
historical facts

27

leaders of different countries
with whom the author met

21

countries mentioned in this book

The main question that
the author gives an answer:
what means and ways
in the fight for power over
the state and the world do
certain circles achieve
by unconditional control
over the will and the mind
of the people

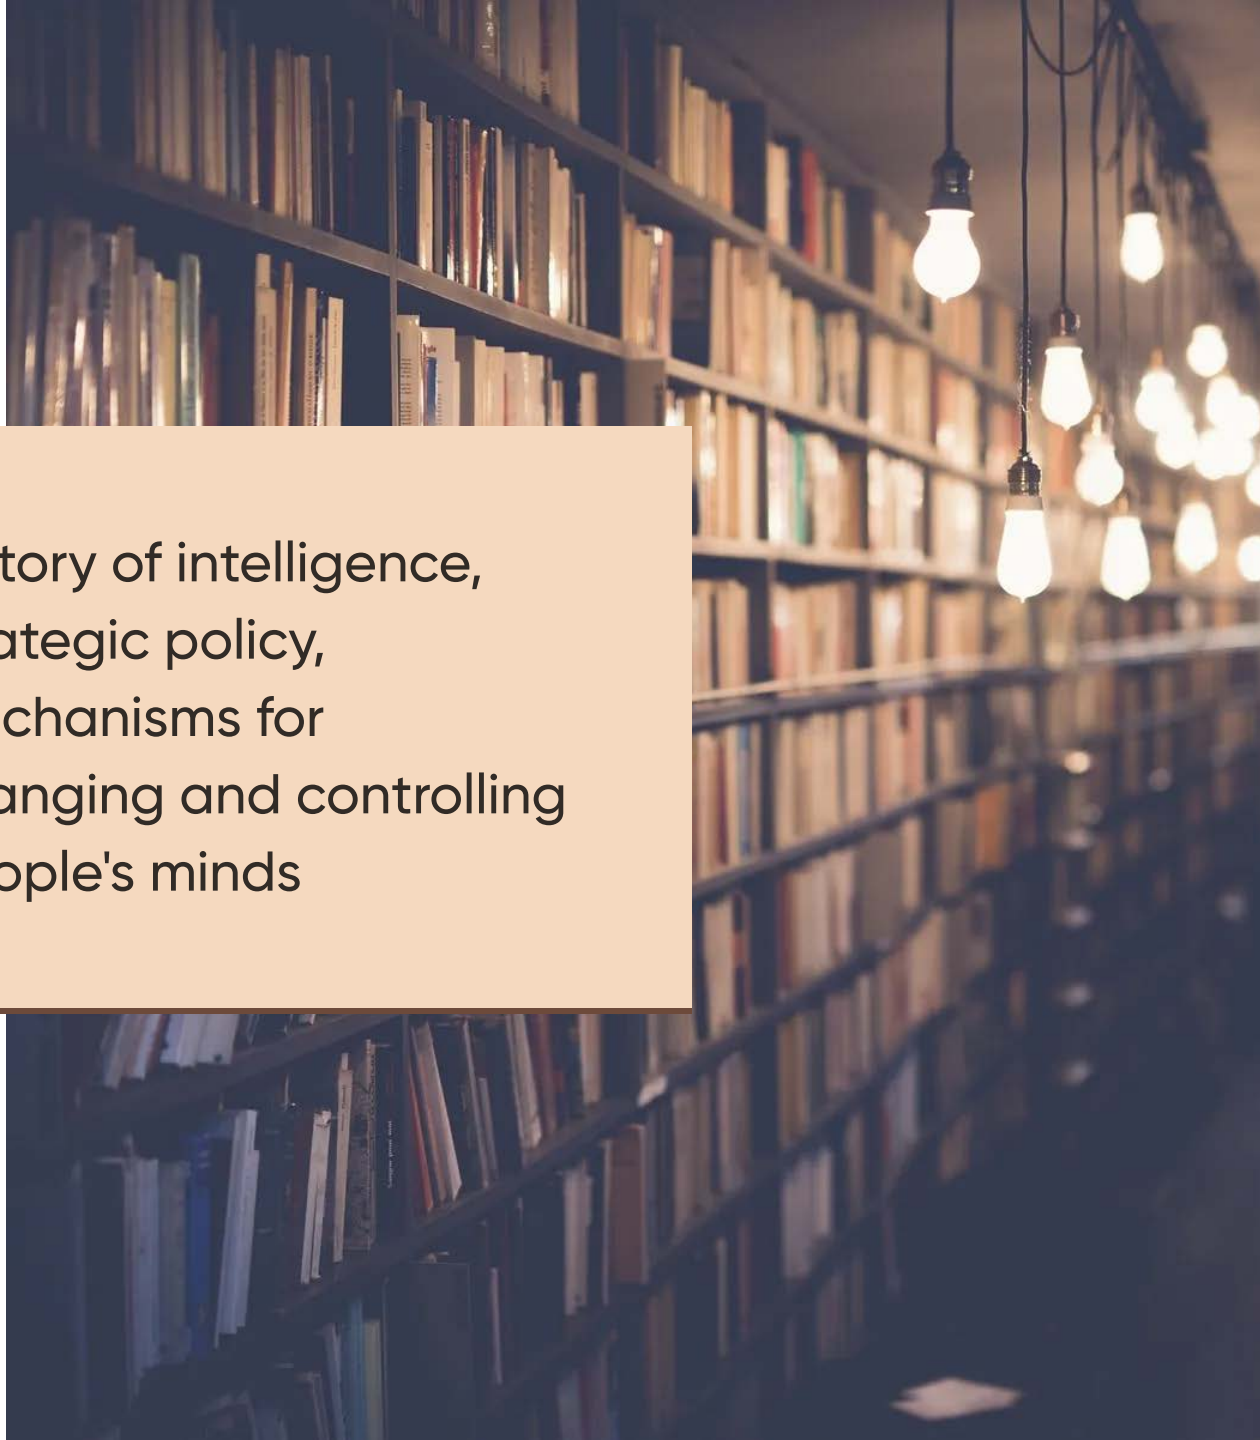

Former CIA director Richard Holmes once said that agents of his agency must be loyal to the leadership in body and soul. The book describes the means by which secret services achieve this level of loyalty.

One of the biggest questions of civilization: who and how leads the leaders of the state to power? How do they pay those people who brought them to power? How does this affect geopolitics?

WHO IS THIS BOOK FOR

The book "Espionage, Encryptors and Chocolate" will be of high interest for those intrigued by the history of intelligence, strategic politics, mechanisms of changing and controlling the minds of people, methods and ways of recruiting people.

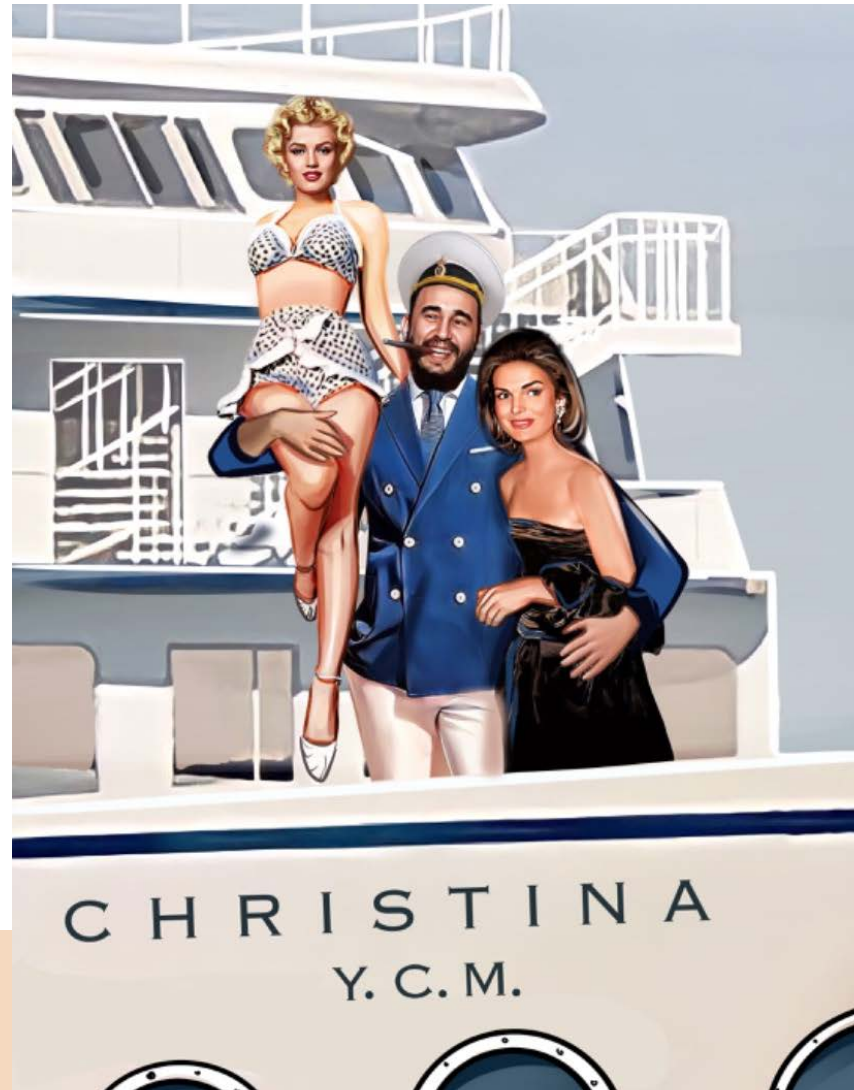

The book is for those who want to know the ways in which the secret world forces, including secret services, establish the right people at the head of states and then control them to achieve the required global political changes.

History of intelligence,
strategic policy,
mechanisms for
changing and controlling
people's minds

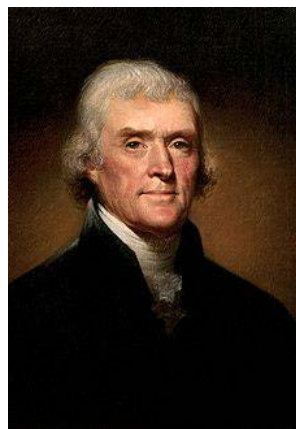

THE BOOK IS BASED ON REAL EVENTS

The book "Espionage, Encryptors, and Chocolate" based on historical studies of the activities of the various and most powerful intelligence agencies of the world for about five hundred years sheds light on the most closed topics: the secrets of the "fight for power" and "for thrones". As well as the hidden causes of the wars that changed the political structure of the world. After reading the book carefully, you will be able to understand contemporary political events more clearly.

Sometimes the biggest political events in the world hide personal ambitions and grievances of country leaders and, surprisingly enough, their sons or daughters. Just as the Greek war for Troy was caused by the treason of Beautiful Helen, and the Cuban Missile Crisis by the incredible rampage of the world's elite on Onassis' most expensive yacht, the "Christina".

FREEDOM PHILOSOPHY

Thomas Jefferson, author of the U.S. Declaration of Independence, one of the first U.S. presidents, the greatest cryptographer of the 19th century, believed that it was cryptography, which the government (England) could not decipher, that brought freedom to America.

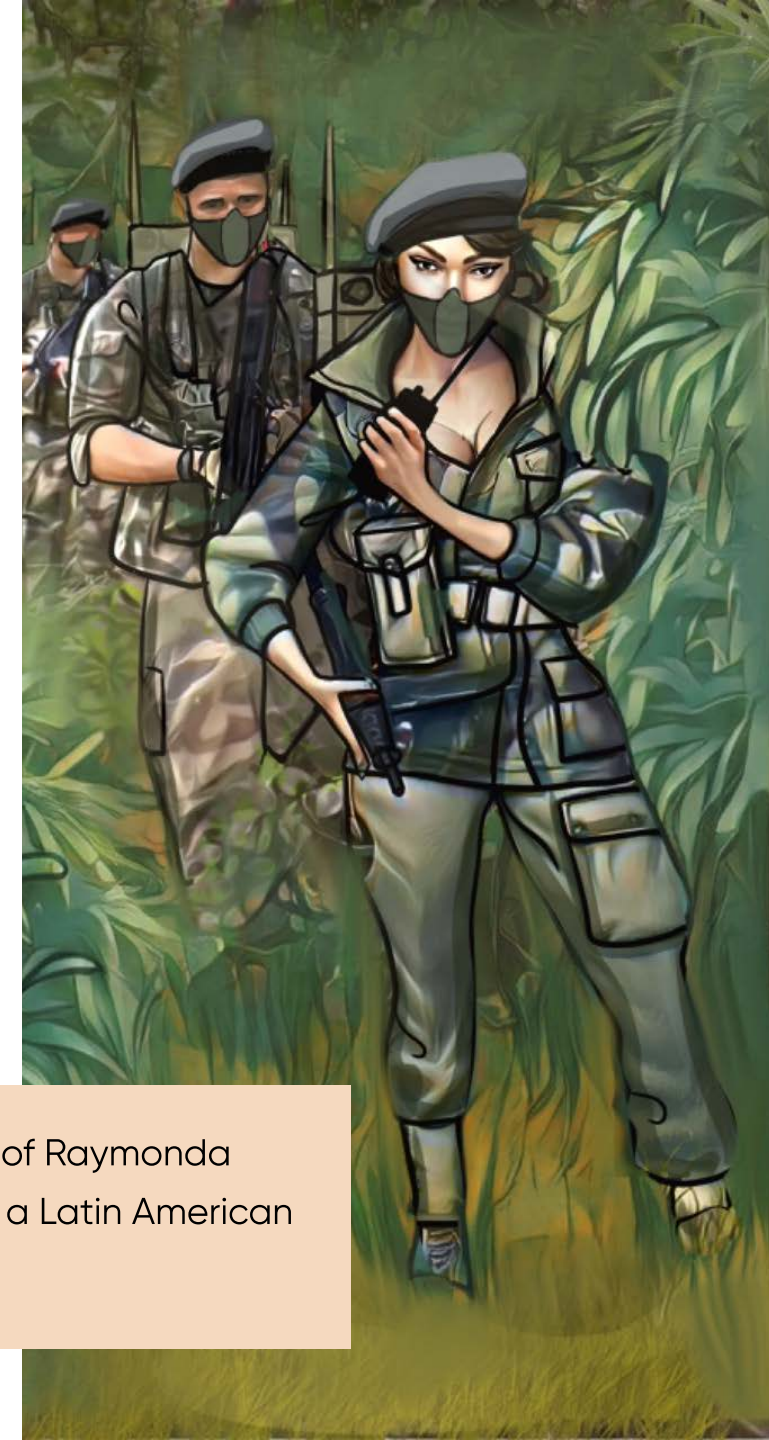

The Aztec conqueror Marquis Cortez believed that his mistress Malinche, daughter of the Aztec high priest and one of the most beautiful women in the country, was "the first after God whom Spain should thank for the conquest."

The name of Malinche was cursed by the Indians for her treachery. No woman in Latin America was called by that name for more than 300 years.

The Marquesa Raymonda, a young girl of incredible beauty, daughter of one of the richest Spanish magnates and a descendant of Cortés, set the goal of her life to free the countries of Latin America from the slavery of the dictatorship that world capitalism had established. She wanted to return Freedom to the countries from which it had been stolen by Cortés and Malinche.

Real Freedom can be found when the dictatorial regimes stop controlling the information of citizens, and cryptography is the main key to success in this.

The book recounts the brutal joint struggle of Raymonda and an independent cryptographer to free a Latin American country from dictatorship

THE HEROES OF THE BOOK

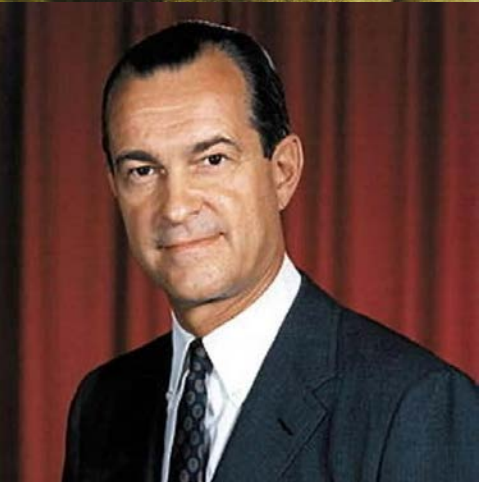

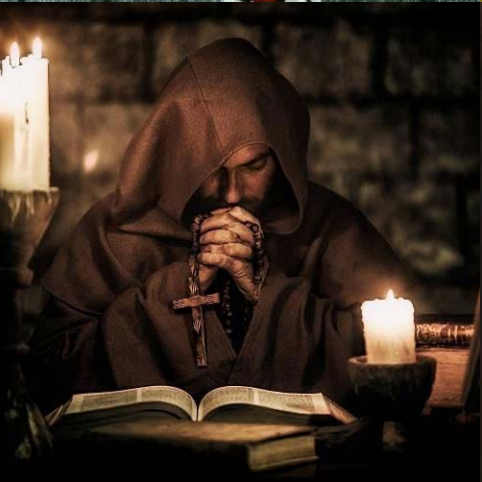

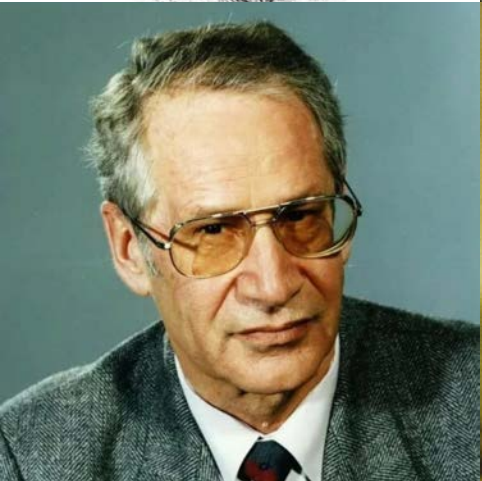

The first story of the book, "Sergei and Raymonda", is based on real events from the author's personal and professional life related to the launch of a Russian satellite in Colombia.

For eight years, in the capital of Colombia, Bogota, there was a representative office of Anatoly Viktorovich Klepov, who was responsible for the cryptographic protection of the satellite.

In Colombia the author learned the story of the conquest of Mexico by Cortez with the help of chocolate of the High Priest of the Aztecs.

In addition to the title story, the book contains several feature stories and analytical articles covering periods of history from Cortés' conquest of Latin America to the collapse of the Soviet Union.

The reader will watch outstanding historical characters passing by: Fernand Cortez and his mistress Malinche, who with the help of chocolate priests helped him to defeat the Aztecs, Louis XIV and the Marquise de Mentenon, Elizabeth II, Casanova, Coco Chanel, Marilyn Monroe, John Kennedy, Fidel Castro, Mikhail Gorbachev, Richard Nixon, Joseph Stalin and many others.

THE IDEA BEHIND CREATION

The idea for the book "Espionage, encryptors, and chocolate" came from the professional experience of Anatoly Viktorovich Klepov's activity in 64 countries of the world.

Work with the first persons of states, "hot spots" of the planet, destruction of states and collapse of powerful people – he watched it all personally.

Friendship and work with the leaders of some countries allowed him, as a cryptographer, to look at the ongoing political events in the world from a different point of view.

To many people they seem, at first glance, paradoxical. But this world of intelligence lives by different principles and concepts than those to which ordinary people are accustomed.

World of intelligence lives by different principles and concepts

ABOUT THE AUTHOR

Anatoly Viktorovich Klepov is a hereditary cryptographer. His family has been working in the field of cryptography for more than 150 years. His father, Viktor Ivanovich Klepov, developed and operated the most powerful Soviet cryptographic computer in the world "Vesna", which could decipher almost all encryptions existing at that time. His uncle, Anatoly Ivanovich Klepov, provided encrypted communications for Soviet cosmonauts, starting with Yuri Gagarin.

The companies headed by A. Klepov produced more than 200,000 military-grade hardware encryptors. Including the world's first hardware crypto-smartphone and crypto messenger

Over the years Anatoly Viktorovich has equipped 64 states with best-in-class encryptors. Anatoly Viktorovich's encryptors saved Russia from financial collapse. His devices are used by presidents, prime ministers, kings, sultans, secretaries general, royalty, defense ministries, police, banks, Hollywood actresses...

AUTHOR'S BIBLIOGRAPHY

Anatoly Klepov worked with the President of the Russian Federation Boris Yeltsin, the leader of Cuba Fidel Castro, the King of Saudi Arabia, the Sultan of Oman and the leaders of many other countries, as well as their defense ministers.

He was a friend of Leonid Vladimirovich Shebarshin, the head of the USSR foreign intelligence service, and met with Markus Wolf, the outstanding intelligence agent of the 20th century, the head of foreign intelligence service of the Stasi of the GDR.

Worked directly with Soviet President Mikhail Gorbachev, created for him and his wife, Raisa Maximovna, a personal information system, which also included an analysis and registration of their financial expenses.

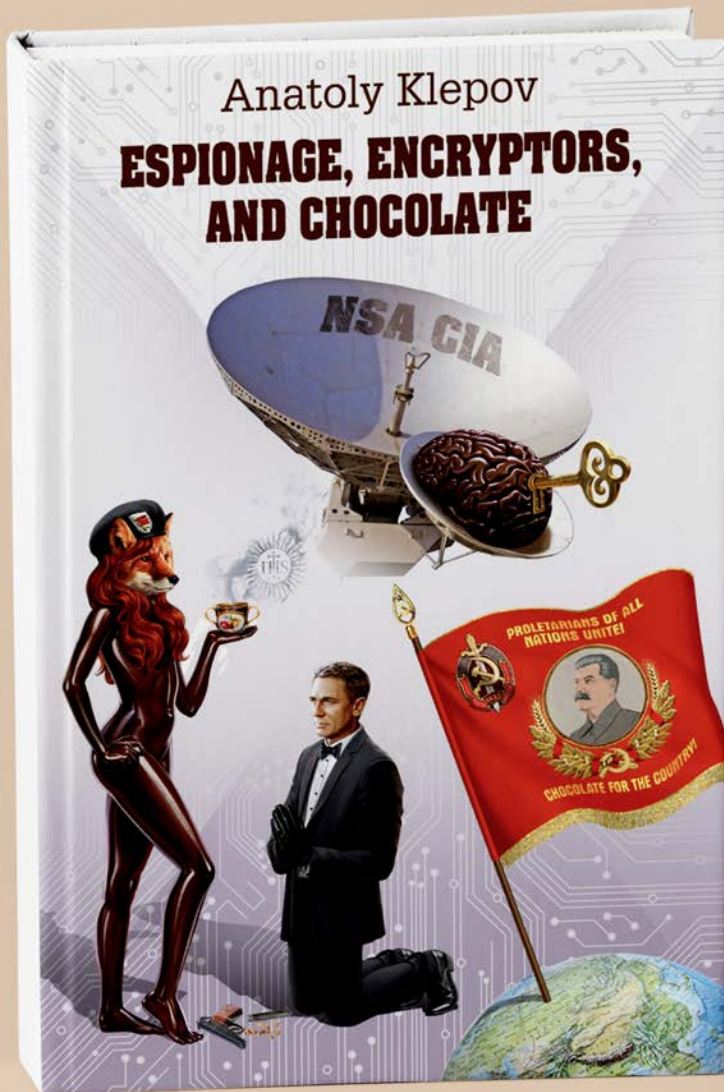

Klepov's previous book – "Encryptors and Radio Intelligence. Shield and Sword of the Information World" was published by the Publishing Center of Innovative Technologies in 2015 with an edition of 1000 copies and immediately after its publication was awarded the prestigious literary prize "Golden Pen of Russia".

Articles and stories by Anatoly Viktorovich Klepov on the history of intelligence are published on Russia's largest literary website www.proza.ru and in the author's column of the publication "Moskovsky Komsomolets"

BOOK PREORDER

Everything in this world is changing rapidly. Quantum computers, artificial intelligence, satellites and the Internet are appearing.

But human passions and emotions, such as pride, arrogance, selfishness, jealousy, envy, revenge, have remained unchanged for thousands of years. And they are precisely the basis of major political events, including wars. Only in the modern world they are hidden more subtly under the guise of sophisticated modern PR. But the essence is the same. All you have to do is to analyze them carefully. And here comes in this book, to help you.
